GVM Receives AE50 Award for New Spreader Double Duty Twin Chain Spreader

St. Joseph, Michigan – November 20, 2017 – The American Society of Agricultural and Biological Engineers (ASABE) has named GVM’s Double Duty Twin Chain spreader body winner of a 2018 AE50 award.

AE50 awards honor the year’s most innovative designs in engineering products or systems for the food and agriculture industries. The Double Duty Twin Chain will be featured in the January/February 2018 special issue of ASABE’s magazine *Resource: Engineering & Technology for a Sustainable World*. For more details visit www.asabe.org/AE50

“We are both pleased and honored to receive the AE50 award for the new Double Duty Twin Chain spreader body” says Mark Anderson, GVM President & Owner. The GVM Double Duty Twin Chain spreader offers up to four section swath width control with simplicity and precision. Mark adds. “for years, the Double Duty spreader body has been leading the dry spreading industry with its consistently wide, flat, and accurate patterns. This year, we added section control to our already impressive pattern, but our key focus was on keeping the design simple and reliable, easy to operate, easy to set-up. We know our owners and operators have limited time, so it was important to make sure our section control would put out a consistent pattern, no matter the material and could be easily tested.”

Companies from around the world submit entries to the annual AE50 competition and up to 50 of the best products are chosen by a panel of international engineering experts. The judges select innovative products that will best advance engineering for the food and agriculture industries.

The AE50 awards program emphasizes the role of new products and systems in bringing advanced technology to the marketplace. These engineering developments help farmers, food processors and equipment manufacturers increase efficiency, enhance quality, improve safety, and increase profits.

Resource, a magazine geared to agricultural, biological and food system engineers worldwide, is produced by ASABE. The magazine is read by thousands involved in the agricultural, food and biological industries. Read more at www.asabe.org/Resource.

ASABE is an international scientific and educational organization dedicated to the advancement of engineering applicable to agricultural, food, and biological systems. Further information on the Society can be obtained by visiting www.asabe.org/.

About GVM Inc.: With 40 years in business, GVM is a well trusted manufacturer of agricultural application equipment. GVM uses their relatively small size as a competitive advantage, and stays close to the market, gaining the ability to quickly adapt to customers' needs and changes in the industry. GVM places a large emphasis on designing and building the highest quality and most reliable equipment designed to fit operations of all sizes. GVM is headquartered in East Berlin, Pennsylvania and their agricultural products include self-propelled sprayers and spreaders, pull type spreaders, an automatic soil sampling unit, and an attachment for safe and easy handling of large industrial tires.
